REZNOR®

SPARES - VIEW AND ORDER ONLINE

We have an easy to use online spares platform called REZNOR.

This contains spare parts for all Nortek branded products, past and present, including Reznor, AmbiRad, NordairNiche, Benson and AirBloc . Visit www.reznor.co.uk to order now.

WEBSITE & LIBRARY

Did you know Reznor has extensive online resources available for you? Find the latest updates and product news on www.reznor.co.uk

You can now access technical literature and information on spare parts for Reznor, AmbiRad, NordairNiche, Benson and AirBloc units at literature.reznor.eu

Request a design for a new project and order your heaters and quotes online.

Our history...

For over 130 years, Reznor has gone from strength to strength, consistently evolving to better serve its customers and maintain its position as a leading provider of heating, cooling and ventilation solutions.

Since the early days as the favoured producer of gas fired stoves for heating residential homes, Reznor has evolved to be the preferred name in industrial and commercial HVAC solutions.

Sonning² OHA is a continuous gas fired radiant tube heating system fitted with either a single internal or external burner, which employs 80% flue gas re-circulation and is designed specially for the building it is required to heat.

The inclusion of modulating burner on the OHA RHE ranges enables thermal efficiencies of up to 96% to be achieved.

The OHA system is designed to provide uniform heat coverage over the entire floor area. The system can also cater for distinct zones providing a varied degree of comfort level within the overall layout of the building.

Nortek strives to become part of the 'design team', working closely with engineers or end users to determine the specific design parameters for the OHA scheme layout. This contact between the company's engineers and the system designer or client will give the most effective OHA system.

Model Range

The OHA Series radiant tube heating system includes nine natural gas or propane burner models from 50 to 400kW, radiant tube lengths from 25 to 400 metres. Maximum tube temperatures range from 200°C to 350°C.

The OHA RHE Modulating Series radiant tube heating system includes 6 natural gas or propane burner models from 100 to 370kW, radiant tube lengths from 35 to 250 metres. Maximum tube temperatures range from 120°C to 290°C.

The heaters will operate equally as effective on a wide variety of fuels; natural gas, LPG and oil (OHA only)

Sonning² OHA

Please contact sales on 01384 489700 for more information on Sonning² continuous radiant tube system

£POA

Introducing the revitalized Nor-Ray-Vac, your trusted radiant system, back by popular demand with cutting edge technology and market leading excellence poised to meet the evolving needs of our customers.

The Nor-Ray-Vac is a gas fired continuous radiant tube heating system, uniquely designed and specified for the building it is required to heat. The following criteria form the basis of each particular system design:

- Heat loss of the building for the required thermal environment
- Local climate conditions
- Type of activity in the building
- Specific architectural features relating to the structure

The Nor-Ray-Vac is a conventional radiant heating system, that operates with on/off control and continuous modulation. This is achieved by adjusting the vacuum as the building temperature varies. The optimum air/ gas ratio is maintained giving maximum comfort & efficiency whilst minimising fuel consumption.

Features include:

- Reduces overall costs, with savings of up to 60% being achieved over conventional heating systems
- Stoichiometric or 'perfect' combustion
- Can be designed to a 92% combustion efficiency & >92% thermal efficiency
- Good aesthetic integration with building

Model Range

The Nor-Ray-Vac Series continuous radiant tube heating system is available in natural gas or propane versions. There are four models in the range - 24kW, 32kW, 38kW and 46kW output - with maximum radiant tube lengths from 9.4 to 27 meters.

Modulating burners are provided on all models allowing them to modulate from 50% to 100% duty (24/12kW, 32/16kW, 38/19kW and 46/23kW). Maximum tube temperatures range from 450°C to 480°C.

Nor-Ray-Vac

POWERFOIL D

The Strong, Silent Type

Direct-drive motor for whisper quiet operation

Patented airfoil design for best-in-class air movement

Nine redundant safety features for ultimate workplace security

New standard **IP66 rating** for use in harsh environments

7-year warranty

REZNOR® + BIG ASS FANS®

Raising the bar on high-tech fans, Powerfoil D is our premium direct-drive fan. We built this HVLS fan from the ground up for industrial and harsh environments, and its IP66 rating means it's able to withstand harsh elements like dust and water. Purposefully engineered to transform the way people feel and work within your space, Powerfoil D takes on hot, gritty conditions with ease and has the specs to excel in any facility where comfort and quiet are valued.

- Diameter options from 8-24 feet
- Six patented airfoils with winglets
- IP66 rating for indoor or outdoor use
- 15-year mechanical warranty; 5-year electrical (extended warranty available)
- Powerful Neodymium magnet motor provides virtually silent fan operation and optimum efficiency
- 200-277 / 338-480 multi-phase VAC options

High Volume Low Speed (HVLS) fans are large diameter fans designed to circulate high volumes of air while operating at low speeds. They create more comfortable conditions for people through enhanced floor to ceiling air circulation and temperature regulation with lower energy utilisation.

COMET+

The COMET+ range of cabinet heaters combines inovative design with proven heat exchanger technology to provide a efficient cost effective durable range. Standard efficiency models available with modulating burner with a 2:1 turn down with use with Natural Gas (G20) and Propane (G31). These models are also available with the use of both 35 sec and Kerosine oil. High efficiency (condensing) models are only available in Natural Gas (G20), with modulating burner with 4:1 turn down. All models have EC plug fans as standard.

ALL MODELS ARE AVAILABLE IN NATURAL GAS FIRED, PROPANE FIRED OR OIL FIRED VERSIONS. OIL FIRED MODELS ARE SUPPLIED WITH A FIRE VALVE AND AN OIL FILTER AS LOOSE COMPONENTS

NOVAEMS

In addition to controlling, managing and monitoring heating, the innovative system contains a user-friendly panel with the added benefit of remote access.

KEY FEATURES:

HEATING CONTROL

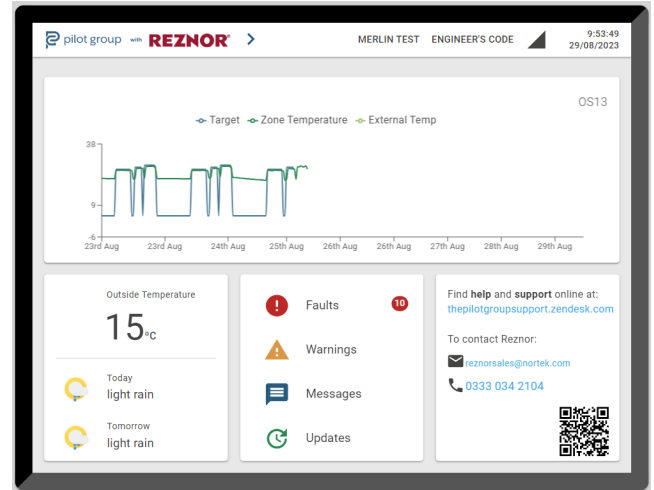

Control and schedule heating with a selflearning system that averages a 43% reduction in energy consumption through greater efficiency.

MULTI-SITE CONTROLS

Schedule the on/off operation to reduce the maintenance and save energy.

REMOTE ACCESS & REPORTING

With a single point of control, view consumption, schedules and more from anywhere with internet access.

NOVA EMS SYSTEM FEATURES

HEATING CONTROL	REAL TIME MANAGEMENT CONTROL
Scheduling operation of heaters	Easy to navigate user interface ✓
Residual Heat Utilisation	Cloud based, enabling remote access ✓
Pre-Heat Optimisation utilising our self learning algorithm	Pre-Heat and End time optimisation ✓
Weather compensation	Live data graphs ✓
Accurate temperature control	Password protected access ✓
Process control monitoring to maximise efficiency and safety	Data export ✓
Door switch and failsafe strategy	Site map ✓

HEATER CONDENS heating and ventilation devices are designed to be applied in buildings of small and medium capacity, especially as production and warehouse halls, car showrooms and service stations, sports halls and stadiums, sacral buildings and churches, retail stores and wholesale outlets, agricultural facilities, exhibition surfaces. HEATER CONDENS is a special, dedicated solution to be connected to low water temperature sources (for condensing boilers, industrial heat pumps). The main advantages of HEATER CONDENS are the high temperature of exhaust air generated by the low temperature of water supplied to a unit, maximum use of water coil surface – new geometry of coil construction (enhanced fins size, lower space between fins), optimised airflow exhaust – in effect high air exhaust temperature generated on each speed of the fan.

The Reznor ECHO Air rotation units are ideal for applications such as distribution centres and warehouses requiring frost protection or constant background temperatures. The system provides even heating over large areas and eliminates the requirement for ductwork or de-stratification fans.

Simple fast track installation provides an economic and efficient solution with low ongoing maintenance costs.

The range are both UKCA and CE approved units with thermal efficiency in excess of 91% ECHO Air Rotation provides a simple cost effective solution by utilising a much greater supply air volume with only a low temperature rise.

The system draws in the cooler air at low level and rotates the air to high level where it mixes with the warmer air. This develops a gentle airflow pattern, displacing the high level hot air and returning it to floor level to provide automatic de-stratification.

When additional heat is required the supply air is tempered to give a minimal temperature difference between air discharge and the space temperature so that the natural tendency of the hot air to stratify is virtually eliminated. The rotation of large air volumes of tempered air provides even wall to wall and floor to roof temperature distribution and allows heat gains from lighting and other sources to be re-circulated to low level to reduce energy consumption.

Model Range

The ECHO range has four models; Lieutenant, Captain, Major and Colonel. Each model has a maximum and minimum kW Output, plus a maximum and minimum Airflow range.

Available as heated (via Natural Gas or Propane) or as a De-stratification model (no heat).

ECHO

ECHO

Please contact sales on 01384 489700 for more information our ECHO Air rotation units, and the team can provide selection advice.

£POA

Features and Benefits

- Large areas heated by a single unit so that number of units is reduced to a minimum
- Fewer units, all sited at low level reduces ongoing maintenance costs
- No requirement for high level destratification fans
- No requirement for costly ductwork installation
- Higher thermal efficiency for reduced running costs
- Heat outputs up to 586kW from a single unit
- High burner turndown ratio for closer temperature control

The Reznor GENCO Modular air system is a range of heating, cooling, and ventilation units, offering energy efficient solutions for large open areas.

The modular system can be configured to provide various Heating and Cooling outputs with differing battery types for a range of air volumes for both supply and extract. This allows our teams utilize the modules to suit your needs.

Model Range Outputs

- Air volume range; 5m³/s to 25m³/s
- External static pressure available up to 1000pa
- Heat Outputs 128kW to 606kW
- Cooling Outputs

Modules includes:

Fan Only Module

- Supply Air Module
- Extract Air Module

Heater Module

- Indirect gas fired heat exchanger
- Direct gas fired heat exchanger
- Electric heating coil (max 117kW)
- LPHW heating coils
- DX heat pump coils

Cooling Module

- DX cooling coil
- Chilled water coil

Filter Module

- Slimline filter section (Panel filters)
- Standard filter section (Bag Filtration)

Silencer Module

Mixing Box Module

Cross flow heat recovery Module

GENCO

GENCO

£POA

The Air Mix high induction air distribution system is an innovative concept that is quick and easy to install, reliable, and inexpensive in operation. It provides an evenly diffused distribution of warm air and is ideal for open warehouse or retail areas without false ceilings.

The system utilises a lightweight duct that has a large number of small outlet nozzles, either evenly spaced along the length of the duct or located in specific areas.

Air is introduced into the duct and forced out of the nozzles at high speed, creating a negative pressure zone - thereby inducing surrounding air and recirculating "free heat" from lighting and heat that has risen to the roof space which would normally be wasted.

The result is a very evenly distributed heat at low air velocities and low noise levels, eliminating excess heat stratification and the need for air re-circulation fans.

Model Range

The Air Mix diffusers are made with airtight fireproof fabric, which thanks to a special treatment will remain unaltered over time. They are available in a range of diameters & colours, all are supplied complete with assembly kit.

The kit includes:

- Tailor made duct
- Fixing bands
- Suspension system

Specification

Air Mix is centred on an innovative duct system manufactured from a fire resistant coated fabric, specially treated against dust, and acid vapours for guaranteed stability.

The system allows the use of smaller duct diameters, reducing the weight on the building structure and reduces installation time.

AIRMIX

AIRMIX

Please contact technical design on 01384 489700 for more information on AirMix induction air distribution systems

£POA

Each system is custom designed and manufactured in accordance with individual specifications, with the number, layout and diameter of ducts determined for maximum efficiency. Ducts are available in a wide range of colours to suit the decor of the location and require no further decorative finish on site. Final adjustments are carried out after installation and the system needs minimal maintenance.

Reznor Smitsair® offer an alternative air induction system that gives optimal air distribution in large open space premises, such as market halls and warehouses.

The aerodynamic construction of the nozzles makes it possible to achieve airflow velocities of 10 to 30m/s at a proportionally low nozzle pressure. The nozzles may be applied in groups on plenums or spaced out along a conventional duct system, allowing for flexible or irregular heating patterns in any large premises.

Primary air at high velocity entrains and recirculates large volumes of secondary air to produce a comfortable working environment.

The nozzles are easy to fit or remove by hand and the direction of the airflow can be adjusted after assembly from 0° to 60°. Air throw - from 15 to 50 metres - is calculated before assembly and may be adjusted during installation.

The Smitsair® system can be used to heat, cool or ventilate large spaces with negligible differences in vertical and horizontal air temperatures.

Features & Benefits

- Low static pressure
- Uniform distribution of air
- Adjustable nozzles
- Long throws available
- Low noise
- Available in black or white

Payment Terms

30 days from date of invoice for approved accounts. Payment prior to despatch and early payment discounts quoted upon request.

Returns Policy

We hope you will be completely satisfied with any product or component purchased from Nortek Global HVAC UK Ltd, but if you wish to return an item, we aim to make it as quick and convenient as possible.

Returns Process

Please call 01384 489 700 and select from one of the options for the relevant product return.

Please have your return details ready and our trained staff will guide you through the process. On acceptance a returns material authorisation number will be given which must be included both on the packaging and returns paperwork. Upon the issuing of an RMA number, goods must be returned to us within 10 working days. We are unable to process any goods returned without an RMA number.

Not all requests to return goods will be accepted.

Damaged in Transit

If you take delivery of a product that has been damaged in transit, the goods must be checked and any damage reported in writing within 3 working days. Claims made outside this period will not be considered. The product then requires return/collection within 10 working days.

Return of Faulty Goods

Should a fault develop with a product purchased from us within the first year of ownership, please contact our Service department with details of the fault and we will advise you how to proceed. Nortek Global HVAC UK Ltd reserves the right to either replace or repair faulty item(s). Should we deliver a replacement item we will invoice for it, crediting the faulty item upon receipt.

Ordered Incorrectly/Incorrectly Supplied/Not Required

If an item has either been ordered incorrectly, incorrectly supplied or is not required, it can be returned within 30 days from purchase as long as it remains unused, in new condition and with all packaging and labels intact. Should Nortek Global HVAC UK Ltd incur any costs in re-working or re-packaging the returned items to a re-saleable condition, this will affect the amount of credit due.

Returned items that have been ordered incorrectly or are not required will incur a 25% restocking charge. If these items are collected, a collection charge will also apply. Heaters built to customer specification will not be eligible for return; any cancellation prior to despatch will be subject to a charge relevant to costs incurred.

Excess Items

Nortek Global HVAC UK Ltd systems are designed using the information available to us at the time. Due to the high cost of handling and risk of damage, it is not possible for excess Nor-Ray-Vac, herringbone materials or warm air flue to be returned for credit.

Delivery Dates

All dates quoted for delivery are approximate only and Nortek Global HVAC UK Ltd shall not be liable for the delay in delivery of goods however caused. You are advised to ensure that goods have been delivered to the required location before committing labour.

Radiant heater stillage

For large radiant heater orders, components are delivered on stillages, which should be unloaded upon receipt and returned to the delivery vehicle. Failure to do so will result in additional charges to collect and return stillage(s).

What is covered under our standard warranty:

All heaters, controls and accessories supplied as part of a new heating system

WARRANTY	
Labour	1st Year
Parts - Excludes consumables (i.e belts, filters, fuses, Quartzglow bulbs etc)	1st and 2nd Year
Access equipment and tool hire	1st Year
Carriage cost for replacements	1st Year

Exceptions for new installations

DESCRIPTION	
DS destratification fans	1st Year (parts only)

Spare parts

WARRANTY	
Controls and accessories supplied as spares (excl consumables)	1st Year
General spare parts (excl consumables)	1st and 2nd Year
Carriage cost for replacement spares	1st Year
Labour for replacement spares	1st Year

Standard warranty period

Date of start: From date of despatch or commissioning date (if no more than 90 days from date of despatch and conducted by a Nortek Global HVAC UK Service Engineer) Commissioning report and documentation will be required.

Who is covered?

Who holds the warranty?: The purchasing customer account holds the warranty.

Payment of items in warranty: Payment has to either have been settled or still be within the agreed account payment terms e.g. an account with a 30 day payment term.

Commissioning and service of units: Proof of commissioning and annual service reports must be supplied by the customer.

Not covered: Unauthorised modifications to equipment

Payments

Warranty parts only request: Customers requesting parts only will be invoiced for the items and carriage. Upon return and our receipt of the faulty items and our agreement as to the warranty, a credit for the value of the invoice will be made.

Under warranty engineer site visits: We will send a 'Warranty' form, this should be completed and returned with an order for site attendance. Customers will only be charged if the call out is not covered by warranty and after full negotiation between ourselves and the customer.

Cash customers: Cash customers should pay pro-forma for the day labour rate and any parts that may be required. If the call-out is found to be covered by warranty then a credit for all items covered by the warranty will be issued.

Standard call-out policy

Engineer call-outs: We aim to attend site upon receipt of full instructions and paperwork. We will however do all we can to meet any specific customer requirements.
